

Innovative Financing for Capital Projects

A FREE WEBINAR PRESENTED BY THE
ENVIRONMENTAL INFRASTRUCTURE COLLABORATIVE

Capital improvement projects are critical to delivering public services, supporting economic development and improving quality of life. Well-maintained streets, dependable water infrastructure, and quality open space strengthen communities and attract businesses and new residents. Yet many communities struggle to fund these investments. As material and labor costs rise and projects become more complex, traditional funding tools often fall short.

This webinar brings together experienced practitioners to share how their communities have leveraged private-sector investment to deliver infrastructure improvements without undermining affordability. Panelists will discuss innovative approaches, lessons learned from public-private partnerships, and practical steps for structuring financing. Whether you oversee capital improvement programs or municipal budgets, you'll leave with ideas for setting up projects and thinking creatively about long-term funding.

SPEAKERS

MATTHEW FLEMING

*Executive Director,
Resilience Authority of Annapolis
and Anne Arundel County*
